## FIBOCOM Wireless INC. at M2M FORUM 2015

Fibocom Wireless INC., a Chinese leading wireless module maker and a M2M communication/LBS solution provider, not only independently designs, develops and manufactures wireless modules, but also provides IOT solutions, which enable secure communications among machines, equipments, vehicles and assets over wireless networks. Thanks to Fibocom's global sales channel, logistics, manufacturing and support, enterprises are able to simplify operations, increase efficiency and create new business models. By combining positioning technology and customize application service into its 2G, 3G and 4G wireless modules, Fibocom delivers a trusted and secure environment in Telematics , wireless retail system, metering and smart grid, security systems, routers & gateways, digital signage, mobile internet etc.

FIBOCOM L810 GL module is a LGA-packed LTE wireless communication module supporting 11 frequencies from TDD-LTE/FDD-LTE/ WCDMA/TD-SCDMA/GSM. The module supports the LTE network based on the FDD/TDD and the 3G fallback. It is applicable to industries like consumer electronics, security monitoring and industrial route.

In a new milestone in FIBOCOM's 15 year history, Intel recently allocated its first batch of investment to promote FIBOCOM's R&D, manufacturing of wireless communication modules and solutions based on Intel Architecture, and provide global users with better wireless experiences.
