

FABRIZIO BARBERO - BIOGRAPHY

Fabrizio has a degree in Computer Science and he is specialized in Artificial Intelligence, Expert systems and Machine Learning technologies.

He is currently Director of Platform & Integration Division at CSI-Piemonte, a full service provider company working for Piedmont Regional Public Administrations, with responsibility for integration at Enterprise level of service and data, web and mobile solutions and identity management technology. He has in charge new initiatives in Big Data management and architecture for Internet of Things.

Fabrizio is experienced in redesigning development organization focusing on project management, engineering and SOA best practices. He has set up Software Development Factories and worked intensively in the standardization of architecture, application development processes and techniques, using object oriented, agile methodologies, dev-ops practices and Java development.

Under Fabrizio's leadership, CSI-Piemonte has successfully achieved the delivery of SOA and ALM platforms, Open data and Big Data technology for enterprise information analysis and coordinated open source technologies adoption. He led the implementation of CSI-Ecosystem, a federation of Information System based on a newborn CSI-Piemonte Private Cloud.

He is currently working on the delivery of "Yucca Smart Data Platform", the Piedmont data hub for Internet of Things, People and Systems and he is exploring infrastructure for big data and advanced analytics projects.
